

Say NO

To Water Fluoridation

Your water is about to be poisoned with a toxic industrial waste. This is illegal, it is mass medication, it violates your human rights and it is known to cause serious adverse health effects.

Only YOU can stop it!

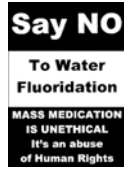

STOP OUR WATER BEING POISONED!

www.npwa.org.uk

WHAT YOU CAN DO

1. Take part in the Yellow Card campaign. Supplies of the yellow card to send to the Chairman of your water company are available at 25 for £2 or 100 for £7 inc. p&p. Please send a cheque payable to NPWA to: 'Yellow Cards' at the address below. You might like to order some to distribute to friends.

The card asks for the Chairman's assurance that he will not add or will immediately stop adding fluorides to your drinking water. The card also says that you will protect your health and your rights by making deductions from your water bills to pay for the purchase, installation and maintenance of a reverse osmosis filter system and/or bottled water.

Boost your local campaign with these excellent A3 'Say No to Water Fluoridation' posters, with three different messages in the bottom third. Three for £2 inc. p&p. Please send a cheque payable to NPWA to: 'Posters' at the address below.

Additional 'Say No' leaflets are available. Twenty-five for £2 or 100 for £7 inc. p&p. Please send a cheque payable to NPWA to: 'Say No leaflets' at the address below.

2. Write to the leaders of UK political parties. Tell them that fluoridation violates our fundamental human right to refuse medication and removes our freedom of choice. Ask them to make opposition to mass medication for non-contagious, non-life-threatening, avoidable conditions their party's policy.

3. Tell parliamentary and local election candidates that you will not vote for someone who advocates medication without individual consent and publicise your opposition to fluoridation in the media.

4. Look out for a public notice in a local newspaper placed by your Strategic Health Authority (SHA) to the effect that it is holding a public consultation on fluoridation. Make a written objection to the SHA and get your friends and family to do the same. You will have only 3 months from the date of the public notice. NPWA will be grateful to be informed of these public notices. Please send us originals of notices and promotional literature. This material may be useful in future legal action.

5. Please support National Pure Water Association by completing the monthly standing order form on this leaflet.

Signed Date

We are happy to receive annual membership subscriptions* and donations by cheque payable to National Pure Water Association.

Donation - £15 £30 £50 £100 Other £

* Annual Membership - Individual £15 Families £18 Unwaged £10

You will have heard the propaganda that fluoridating water supplies is good for children's teeth but there's a great deal that the Department of Health, the British Fluoridation Society and the British Dental Association aren't telling you. They'd rather you didn't know or find out.

'Fluoride' is toxic waste and its use to treat people is illegal

The substance used in fluoridation schemes is fluorosilicic acid, an industrial waste product obtained from the pollution scrubbing operations of the phosphate fertiliser industry. It is contaminated with heavy metals and cancer-causing substances such as arsenic, beryllium, cadmium, lead, mercury, silica and vanadium. This is what the Government wants water companies to put in your drinking water.

Fluoride is more toxic than lead and only marginally less so than arsenic. It is a cumulative poison, with up to 50% of intake remaining in your body.

'Fluoride' is not a registered medicine

Although fluorosilicic acid is a medicine as defined by EU Directive 2004/27/EC, it is not registered as such. It has never been safety tested or subjected to any clinical trials. The claim that fluoride at 1 ppm (part per million) in our water supply is 'optimal' for dental health is unsupported. People obtain different doses according to how much water they drink and how much fluoride they obtain from other sources including food, beverages, toiletries and medicines. Fluoride is known to cause a range of adverse health effects, the most visible of which is dental fluorosis. This mottling and pitting of teeth is a permanent disfigurement.

The Government-funded York Review found that in areas that are currently fluoridated (10% of the UK, e.g. the West Midlands and Tyneside), 48% of children suffer from dental fluorosis with 12.5% having fluorosis 'of aesthetic concern' so water fluoridation is poisoning almost 1 in 2 children. Fluorides inhibit cellular enzymes, cause skeletal damage, suppress the thyroid gland and are toxic to the central nervous system.

There is also evidence that fluoridation raises the incidence of osteosarcoma in young males (Bassin, 2006).

American Dental Association, Interim Guidance on Reconstituted Infant Formula, November 2006

Advised parents and caregivers to "consider using water that has no or low levels of fluoride" during an infant's first year.

Fluoridation is mass medication and an abuse of human rights

Section 58 of the Water Act 2003 is bad law, as it violates our fundamental human right to refuse medication. If you want fluoride you can buy a toothpaste containing fluoride. The use of fluorosilicic acid to mass-medicate the public violates the code of medical ethics set out in the Council of Europe's Convention on Human Rights & Biomedicine. This states that all medical interventions must be carried out under proper medical supervision and in accordance with the patient's needs and fully informed wishes.

Human rights belong to you because of what you are - a human being, and should not be confused with civil rights or liberties which are given by law and may be taken away by the repeal of that law.

Fluoridation chemicals will contaminate the entire food chain

Once fluoridation chemicals are introduced into our water supply they will contaminate everything we eat and drink, everything that requires water - potatoes, rice, processed foods, soft drinks, beers and beverages.

Ordinary domestic water filters cannot remove fluorides. Reverse osmosis filter equipment costs between £150-£1,000, or you could buy bottled water.

Fluoridation and politics

MPs who voted the Water Act 2003 through or who failed to vote against it were in dereliction of their most basic duty, that of protecting the rights of the people they represent.

The BFS and the BDA should be held to account for inciting a criminal act against the public by advocating the administration of untested and unlicensed substances to us without individual consent. They have waged a highly misleading and unethical campaign, supplying misinformation to both Parliament and the public. As a result, the Government gave powers to unelected Strategic Health Authorities to decide whether your area will be fluoridated. SHAs will 'consult the public' and decide whether 'the health benefits outweigh the objections'. This is itself a violation of Article 17 of the Human Rights Act 1988, which prohibits the abuse of human rights.

Several MPs complained in Parliament that SHAs had urged them to vote for fluoridation. Clearly, the public can have no faith or trust in these unelected bodies to undertake impartial consultations. Furthermore, neither "the public" nor the SHAs have the authority to violate the right of ANY individual to refuse medication.

Water fluoridation and Europe

Water fluoridation is practised in only 3 Western European Countries (Spain 2%, the UK 10% and Eire 72%). This represents only 2% of the European population. Some EU countries tried fluoridation and stopped; others rejected it at the outset. It is illegal to dump the toxic waste chemicals at sea or to landfills. However, Europe's pollution scrubber liquor is exported to the UK and Eire for disposal via our water supplies and we taxpayers pick up the bill. Neat trick eh?

History

Sixty years ago, the USA had a massive surplus of waste fluorides from its heavy industries. Industrialists set about creating a market for this waste and sold the idea to a gullible U.S. Public Health Service that fluoride is 'a miracle drug' which reduces tooth decay. It was then promoted without proper scientific studies having been completed. Even today, fluoridation proponents spend time and resources ridiculing scientists, researchers and even dentists who publish findings against fluoridation. "Speaking out against fluoride can seriously damage your career", say the victims.

Can any health professional justify fluoridation?

"No physician in his right senses would prescribe for a person he has never met, whose medical history he does not know, a substance that is intended to create bodily change, with the advice: 'Take as much as you like, but you will take it for the rest of your life because some children suffer from tooth decay.' It is a preposterous notion."

Dr. Peter Mansfield, Director, Templegarth Trust, UK

Definition of a medicine

Any substance or combination of substances presented as having properties for treating or preventing disease in human beings – EU Directive 2004/27/EC on medicinal products for human use.
